IT 110 Lab Activity — Report Form with Async UI States

Prenatal Care System (Flutter Web) · Semester Project · Submitted 21 October 2026

Activity summary

> For this activity we extended our Prenatal Care System Flutter Web project with a new **Submit Report** screen (`lib/screens/report_form_screen.dart`), opened from the **File a Report** button on the dashboard. The screen contains a validated report form (full name, email, title, concern details, and a report-type chip selector) backed by a simulated `ReportService`. Submitting the form shows the four asynchronous UI states required by the activity: **Loading** (full-page centered spinner with "Submitting report…", matching the reference design), **Success** ("Report received" with reference *RPT-0001*), **Empty** ("No reports yet" in the My-reports panel), and **Error** ("Could not submit your report" when the *Other* channel is under maintenance). The screen is registered on route `/report` and linked from a **File a Report** button on the dashboard. We verified the behaviour with `flutter analyze` (no issues) and `flutter test` (3/3 widget tests passing), then captured the six screenshots below from the running release build and pushed everything to GitHub.

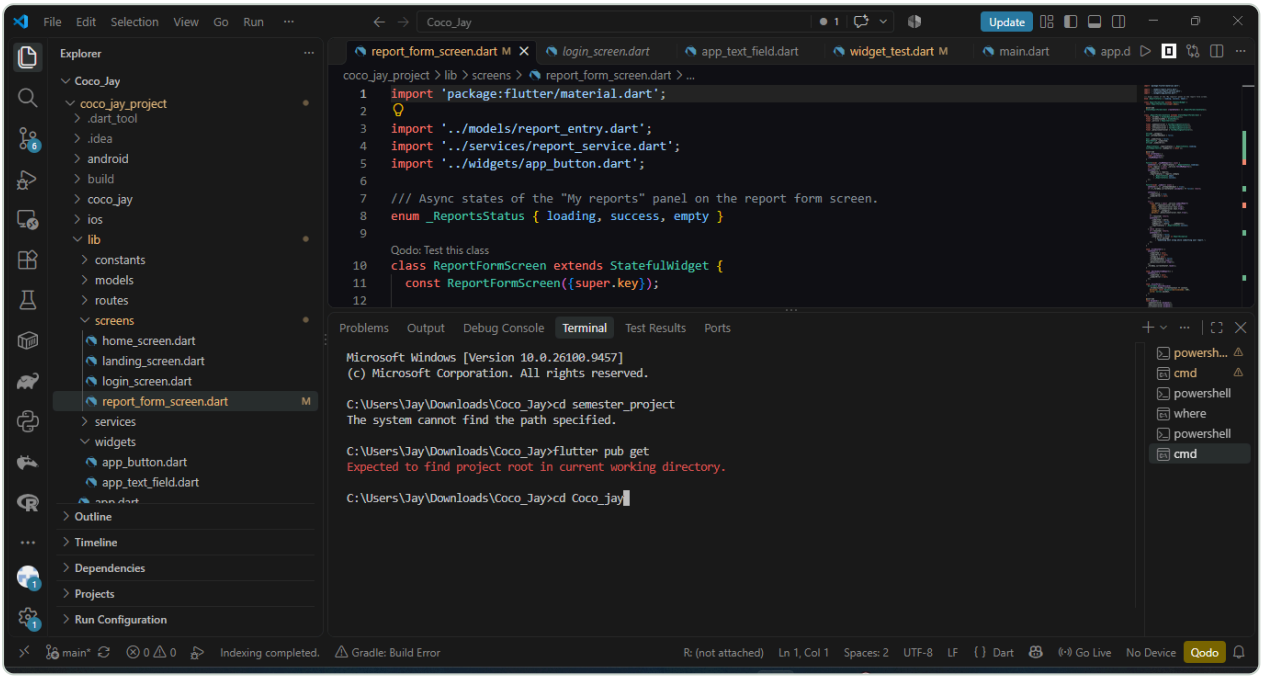

GitHub repository

Repository	https://github.com/jayaguelo-spec/coco_jay
Branch	main
Feature commit	`c676f73` — Add report form screen with validation and async UI states
Screenshots commit	`3dd2bd7` — Add report form activity screenshots (6 required states)
Redesign commit	`3777756` — Redesign Submit Report loading state to match reference; recapture screenshots
Project folder	`coco_jay_project/`

Screenshots

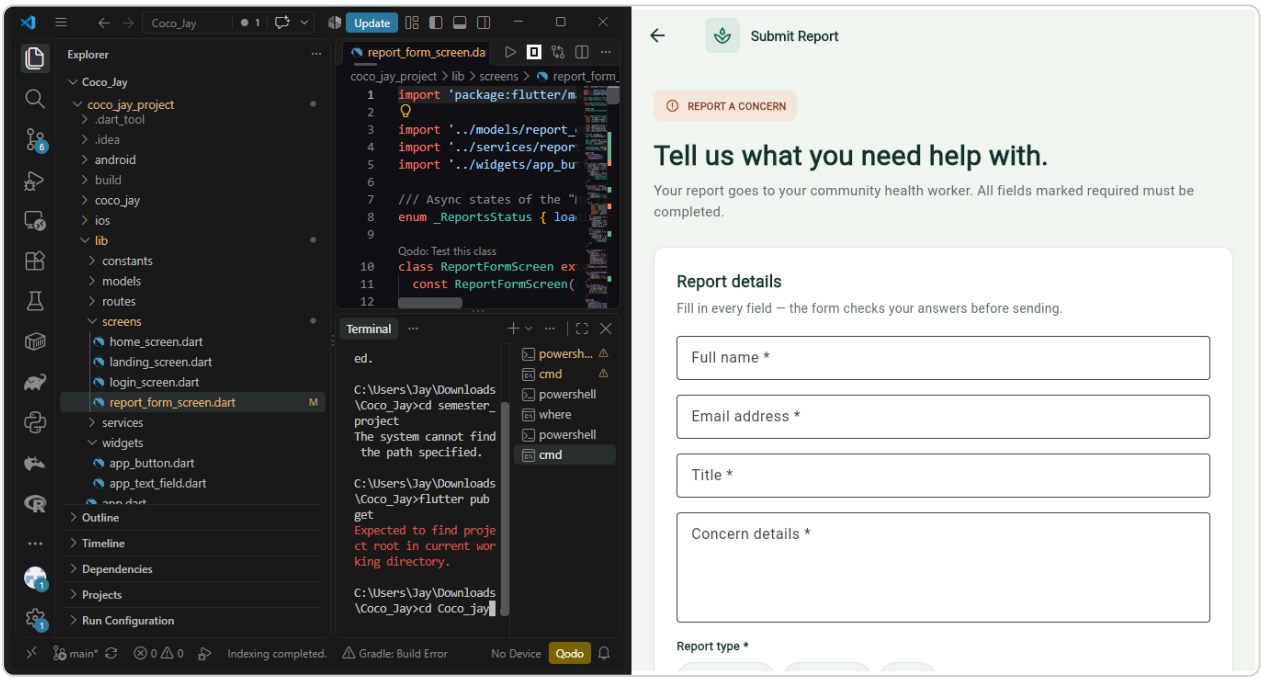

Screenshot 1 — VS Code Explorer

Opened the project in Visual Studio Code and expanded the Explorer so the new files under `lib/` (models, services, screens including `report_form_screen.dart`, routes, widgets) are visible.

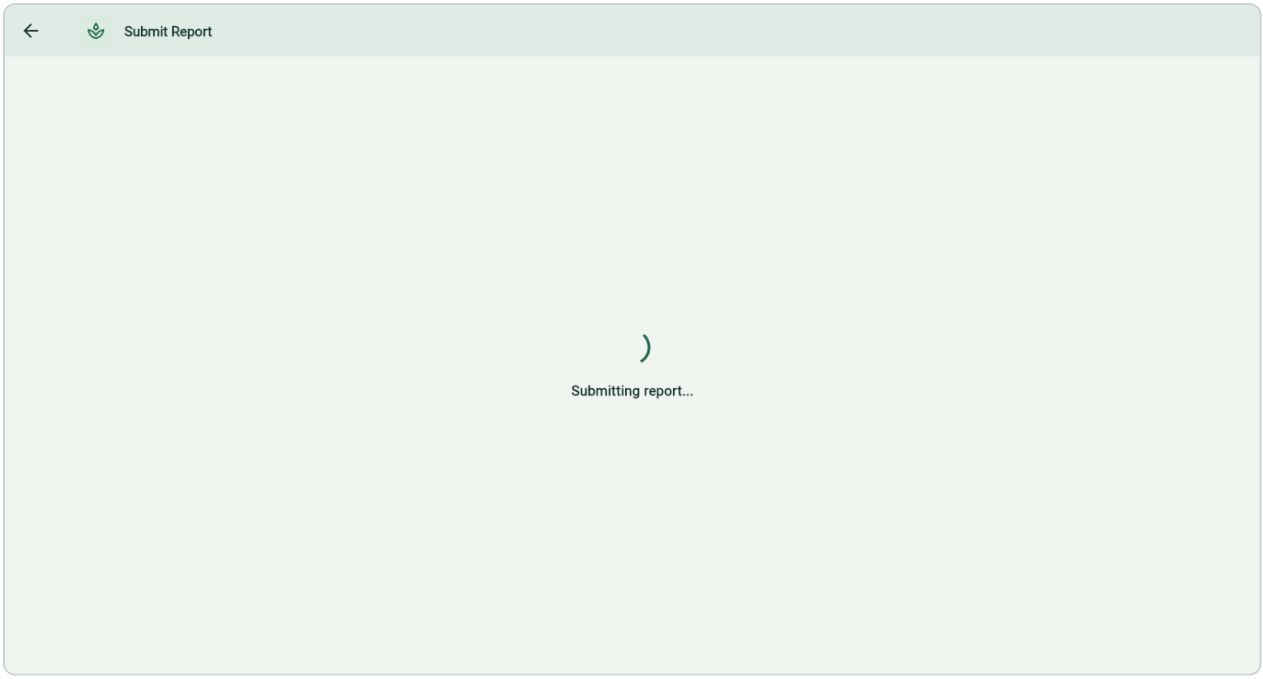

Screenshot 2 — Source code and running app

Side-by-side view: the code of `report_form_screen.dart` in VS Code on the left, and the same report screen running in the browser on the right.

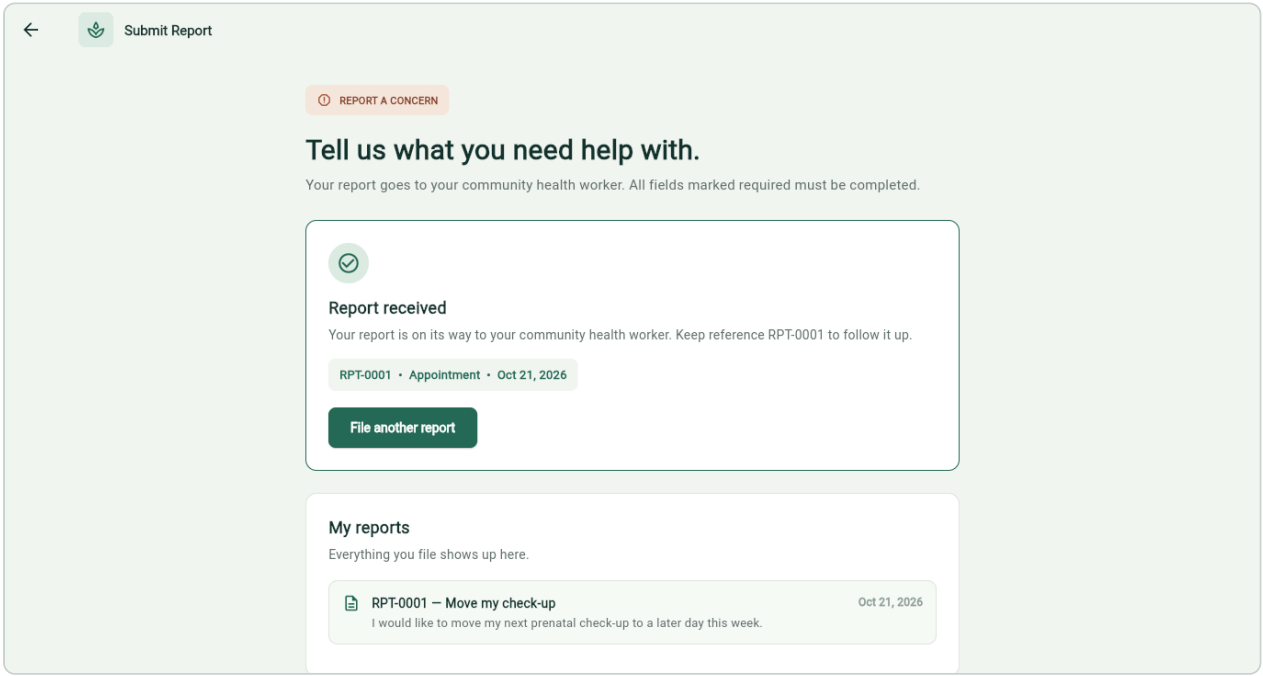

Screenshot 3 — Loading state

Filled in every field, chose *Appointment*, and clicked **Submit report**; the whole screen switched to the loading state — a centered spinner with "Submitting report…" under the **Submit Report** app bar — while the request was in flight.

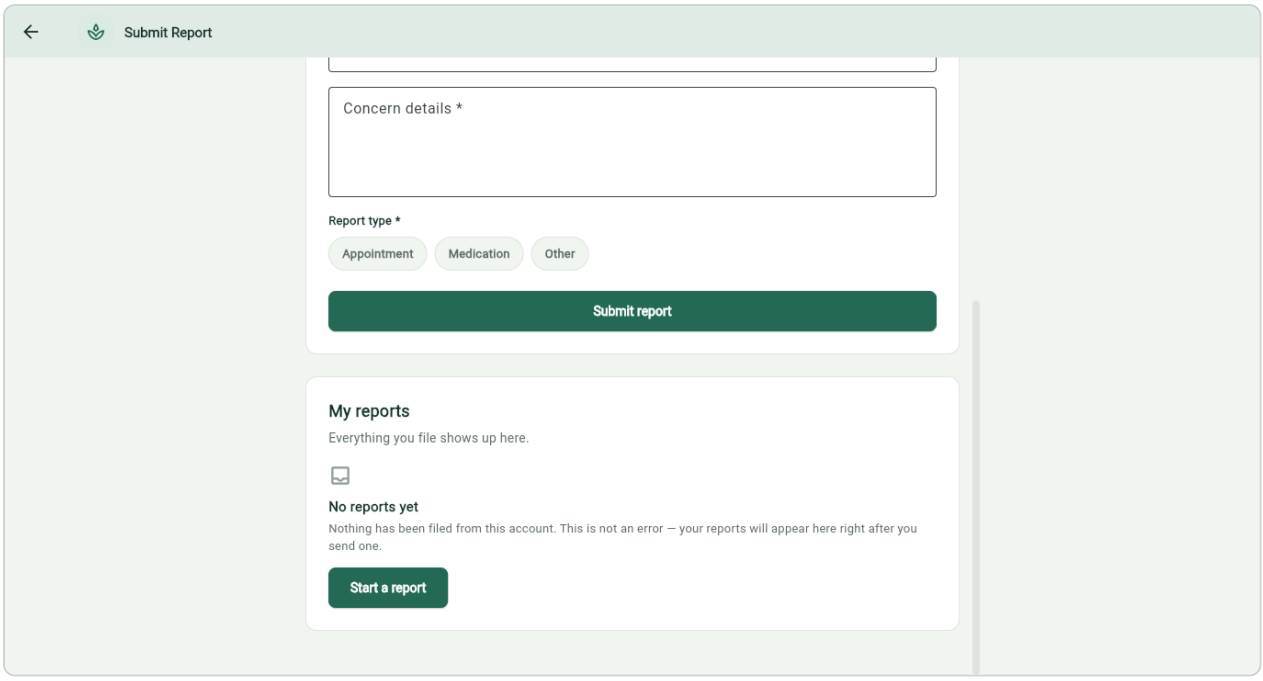

Screenshot 4 — Success state

After the simulated request finished, the success panel showed "Report received" with reference *RPT-0001 · Appointment*, and the new report appeared at the top of the "My reports" list.

Screenshot 5 — Empty state

On first visit the “My reports” panel finished loading and showed the empty state “No reports yet”, explaining that this is not an error and offering a **Start a report** button.

Screenshot 6 — Error state

Submitted a second report with the *Other* category, which the service rejects on purpose; the error panel appeared with the maintenance message and **Retry** / **Edit my report** actions.
